Aviation Manpower Requirements
**Code 30**

Navy Manpower Analysis Center
Defining the Demand Signal for MPTE Supply Chain

- <u>Vision</u>: We lead the Navy in manpower solutions

- <u>Mission</u>: We define, translate, classify the Navy's work into a workforce structure and position demand signal to sustain a combat ready force
- <u>Core Functions</u>:
  - Navy's Occupational Classification Systems
  - Fleet Manpower Requirements Determination
  - Navy's Manpower Management Program Administration
  - Navy's Manpower Information System Business RQMT
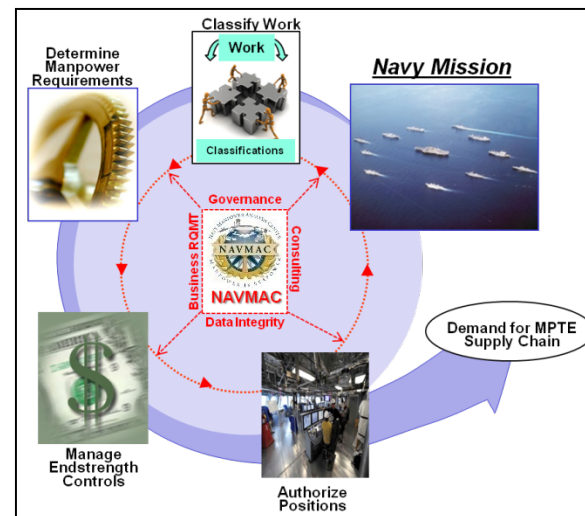

- <u>Output</u>:
  - Valid manpower requirements for all ships and squadrons
    - 201,000 RQMTs - 43% of Navy Military RQMTs
  - Effective Jobs & Qualifications for military human resource mgmt
    - Military human resource structure (Rating, NEC, NEBC, Designators, AQD, NOBC, SUPSPEC)
  - Effective manpower management processes & policies for delivery of the manpower demand signal
    - Navy's authoritative 6,260 Activity Manpower Documents

Civil Service & Contract 235,792

$16B *(fully funded)*

Civil Service & Contract 250,970

Fleet (NAVMAC)	Shore (BSOS)	Joint	IA (N122)
200,847	184,182	29,616	57,289

As of end Feb 2016

Adding value by properly defining Navy's work to create accurate manpower

Department's Primary Mission

It's All About Fleet Readiness…

MISSION: Analyze & determine in accordance with OPNAVINST 1000.16L, the minimum **QUANTITY** and **QUALITY** of manpower required to accomplish 100% of Squadron capabilities as defined in the latest approved ROC/POE.

Aviation Products and Customers
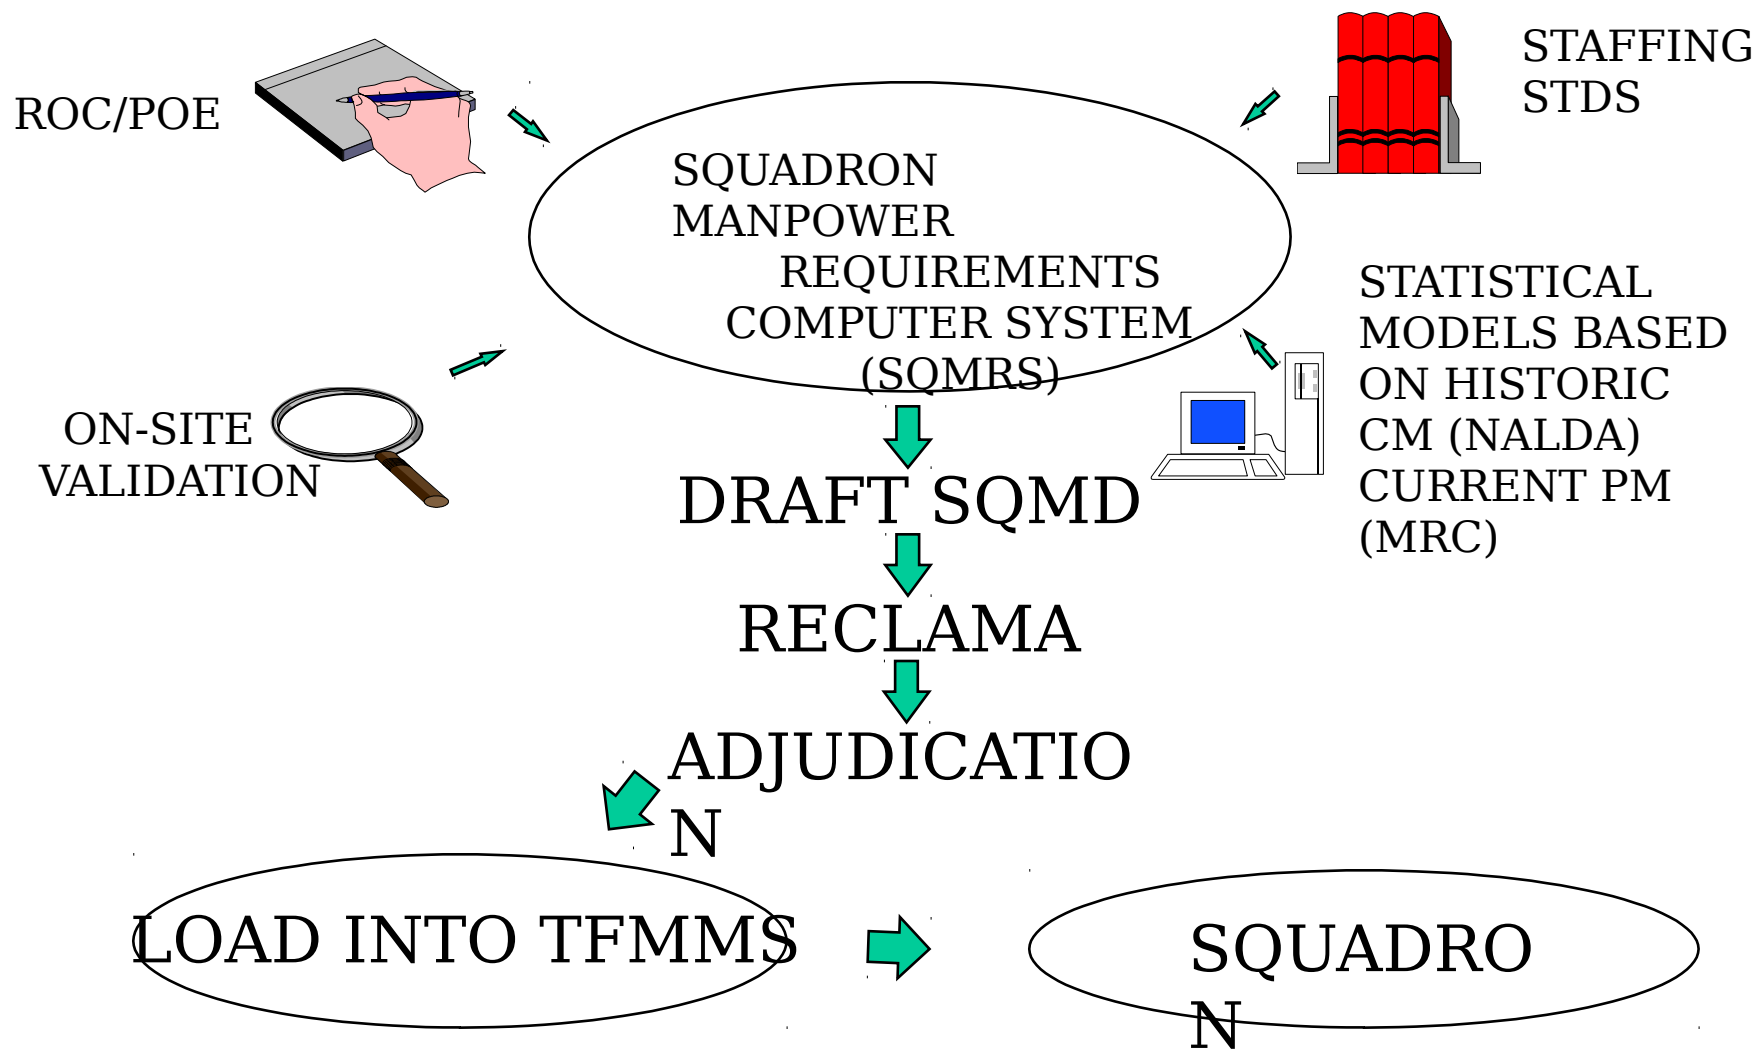

- Products
  - Squadron Manpower Documents (SQMD)
  - Manpower Requirements Worksheet (MRW)
  - Preliminary SQMD
    - Created by NAVAIR
    - Checked by NAVMAC for policy compliance
- Customers
  - Force Commanders
  - All Fleet Squadrons
  - All FRSs, VX-1 & VX-9
  - Afloat AIMD, SEAOPDET, VANOPDET

Major Data Sources

- NAVAIR Logistics Data Analysis (NALDA):
  - Documented Corrective Maintenance by:
    - Type/Model/Series Aircraft
    - Type Equipment
    - Production Work Center

- NAVAIRSYSCOM:
  - Preventive Maintenance and scheduled inspection requirements.

Other Data Sources

- ROC/POE (Required Operational Capabilities/ Projected Operational Environment)
- TYCOM Tasking Letter
- CNO/N1/N98 Directed Functions
- Staffing Standards
- On-Site Workload Measurement (non-NALCOMIS)
- Naval Aviation Maintenance Program (NAMP) COMNAVAIRFORINST 4790.2 Series
- Production Planning Factors (PPFs) for FRS

AIMD Maintenance Values

- Reported maintenance data from NALDA by T/M/S and equipment supported for:

    - Aircraft Maintenance (**AM**)

    - Support Maintenance (**SM**)

- Maintenance data for all deployed carriers is reviewed annually and updated as required

Required Operational Capability/ Projected Operating Environment

✄ ROC: Defines the Mission, Functions and Tasks your aircraft platform is to perform.

✄ POE: Defines the minimum capabilities or parameters to accomplish your aircraft platform's operations.
  - Aircraft Utilization (flight hours / month)
  - Sortie Length
  - Crew / Seat Ratio
  - Primary Aircraft Authorized (PAA)
  - Additional Manpower Requirements

TYCOM Tasking Letter

✂ Tasking Letter:

- The most critical element in developing the MRW

- Identifies:

  - Aircraft type/model/series (T/M/S) and number

  - SEAOPDET Identification/Location

  - Quantity and type of test bench/equipment

SQMD Development

- During SQMD development, we use:
  - Naval Aviation Maintenance Program (NAMP) to define overall SQMD. States a need for work centers that aren't directly tied to the maintenance of aircraft but, play a vital role in the effort. Examples: Quality Assurance, Maintenance Control, Maintenance Administration and Material Control.
  - Staffing Standards to determine support/non-production work center requirements.
  - Measured Workload Equations to determine production work center requirements.

Staffing Standards

- Staffing Standards are either Directed or Engineered.
  - A Directed Staffing Standard is a requirement specified by instruction/policy (CMC, DAPA, etc.) not otherwise tied to any countable item/event factor.
  - An Engineered Staffing Standard is a relationship between man-hours and a specified set of tasks, written as an equation with at least one countable item/event factor and includes an optimized distribution of both quantity and quality manpower (YN, PS, etc.).

Engineered Staffing Standard

Number of Personnel Assigned Example

Yeoman Calculation

$$\frac{(.7290)\ (X)}{\textbf{70 Hour Work Week}}$$

X = Total Officer/Enlisted Requirements
X = 236

172.044 divided by 70(work week) = 2.45 = **3 requirements**

Staffing Standards

* CMDCM
* CCC
* DAPA
* SAFETY PO
* MC MCPO/CPO/FDC
MC CLERKS
MAINT ADMIN
* DATA ANALYSTS
* DIV CPO

* HAZMAT
TOOL ROOM / IMRL PO
* PHASE SUPERVISOR
TROUBLESHOOTERS
TRAINING CLERKS
* QAR
* TECH PUB LIBRARIAN
YN/PS
OPS CLERK

*Directed Staffing Standard

Workload Elements
for Production Work Centers

- ## Administrative Support (AS)
  - ### Applied to all production work centers
- ## Facilities Maintenance (FM)
  - ### Applied using janitorial handbook - based on shop size
- ## Utility Tasking (UT)
  - ### Applied to production work centers that deploy on aircraft carriers
- ## Support Action (SA)
  - ### Applied based on mission of work center and T/M/S

Workload Elements (cont)

- Preventive Maintenance (PM)
  - Collected from the Maintenance Requirement Cards (MRC) deck for each Type/Model/Series aircraft assigned to your activity.
  - Conditional Inspections are extracted from NALDA and used in our CM workload calculation.
- We then apply:
  - 17 percent Make Ready/Put Away (MR/PA) allowance to total PM for work center.
- Some T/M/S will have models developed to predict PM based on actuals, but that will be the exception

Workload Elements (cont)

- Corrective Maintenance (CM)
  - <u>Your</u> reported maintenance data is used in the development of our T/M/S maintenance predictor model. This data is retrieved directly from Naval Aviation Logistics Data Analysis (NALDA) database.
  - A maintenance model is developed using regression analysis process and industrial engineering practices and tools to predict future workload for the aircraft.
  - Up to an 8% Production Delay (PD) allowance is applied to the work center PM and CM calculations.
Navy Standard Productive Availability Factors

- Squadron Personnel at Sea - 70 hours
  - VAQ, VAW, VFA
  - HSC, HSM etc.
- Shore Based Deployable - 60 hours
  - VP, VR and VQ
  - Expeditionary HSC and VAQ etc.
- Shore Based - 33.38 hours
  - Fleet Replacement Squadrons, VX etc.

Squadron Personnel at Sea Productive Availability Factor

Legend: Productive Hours | Sleep | Personal | Messing | Sunday Free | Service Diversion | Training

Pie values: 70, 56, 14, 14, 3, 4, 7

OPNAVINST 1000.16L – Appendix D

81 Potential Work Hours per week

Shore Based Deployable Productive Availability Factor
■ Productive Work = 60 hours ■ Training =7 Hours ■ Service Diversion = 14 Hours

Only shows
the same 81
Potential
Work Hours

Shore Based
Productive Availability Factor

33.38 — Productive Hours

1.52 — Holidays

2.62 — Leave

1.47 — Service Diversion
1 — Training

Legend:

40 Potential Work Hours

Workload Equation Example

W/C 110 (*example carrier based*)

$$\frac{\text{AS} + \text{FM} + \text{UT} + \text{SA} + \text{PM} + \text{CM (HRS/WK)}}{\text{Productive Work Week}}$$

$$\frac{154 + 5 + 6 + 306 + 105 + 242}{70 \text{ Hour Work Week}}$$

818 / 70 = 11.68 or **12 Requirements =** **Quantity**

Paygrade Matrix = Quality

Paygrade Matrix

W/C 110
Example

PAYGRADE	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18
E-8											1	1	1	1	1	1	1	1
E-7				1	1	1	1	1	1	1	1	1	1	1	2	2	2	2
	1	1	1	1	1	1	2	2	2	2	2	2	3	3	3	3	3	3
E-6			1	1	1	2	2	2	3	3	3	4	4	4	4	4	5	5
		1	1	1	2	2	2	3	3	4	4	4	4	5	5	6	6	7
E-5																		
E-4																		

AIMD Production Work Center

Work center Requirement = $\dfrac{AM + SM + AS}{70}$

Where "AM" = Calculated Aircraft Maintenance by T/M/S
 "SM" = Calculated Support Maintenance by equipment
 "AS" = Calculated Administrative Support by Work Center

Total requirements are then applied to specific staffing tables for paygrade assignment to meet NEC requirements and distribution.

Officer and Aircrew Requirements

- Aircrew
  - Driven by Production Planning Factors (PPFs) for FRS
  - Driven by Crew Seat Ratio (CSR) & Primary Authorized Aircraft (PAA) for operational fleet squadrons.
    - CSR x PAA = Total Crews
    - Total Crews x Crew Positions = Total Aviators/Aircrew

- Ground Officers
  - As directed by instruction/higher authority, or as defined in the ROC/POE (Intel, Supply, AirSpeed, etc.).

On-site Visits

- They are not always required or feasible
- When site visits occur, they usually:
  - Precede document creation and are driven by changes to the ROC/POE, maintenance practices, or to validate changes to the Maintenance Predictor Model.
  - Involve like-squadrons on both coasts.
  - Include a comprehensive manpower determination brief.
  - Address specific areas of concern.
  - Ensure proper application of staffing standards.

Manpower Document Flow

- NAVMAC generates package (DSQMD or MRW)
- Draft SQMD is provided to US Fleet Forces (USFF)/Type Commander (CNAF)/Wings for distribution and review.
- Manpower issues are returned to NAVMAC as a Fleet Review and Comments package (Reclama).
- NAVMAC reviews, drafts recommendations on the issues, and submits the adjudication package to OPNAV N12.
- OPNAV N12 makes final adjudication decision and returns to NAVMAC for input to TFFMS.
- Requirements become "live" for distribution

Operational Reality
Manpower-vs.-Manning

...manpower requirements are only a part of the overall picture...

Requirements	Endstrength	Authorization	Personnel

Conclusion

- The ROC/POE is the foundation for squadron manpower determination.

- Aviation Staffing Standards are *guidelines* in the determination of overhead/support requirements.

- Manpower requirements are dynamic, the model must be continuously updated to ensure accuracy.

- NAVMAC web site
